

SAFETY MESH FENCE

a heavy duty barrier

A Safety Mesh Fence is a heavy duty barrier fitted to the rear of single sided pallet racking and is compulsory where pedestrian access is located.

The Safety Mesh Fence is self-supporting from the ground and attached to the racking creating a safety barrier from potential falling objects from pallets stored in the racking. The Safety Fence can either enclose the entire rear of the rack from the ground to the top of the top pallet, or can be open from 2000mm from the ground allowing access for picking items at the rear of the racking. The design and construction can be from a standard layout to more Custom panels powder coated in any colour you require.

SAFETY FENCE BENEFITS:

- A Safety Fence enhances safety, is long-lasting and impact resistant
- The modular design of safety fencing offers great flexibility
- A Safety Fence is easily installed and relocatable if needs change
- A Safety Fence can adapt to any floor configuration
- The Safety Mesh Fence is required as per the Australian Standards AS4084 and WorkSafe Guidance Notes
